Profile Summary

Motivated Computer Science & Engineering undergraduate at Daffodil International University with a strong foundation in core programming languages including C, C++, Java, and modern web technologies (HTML, CSS). Combines technical problem-solving capabilities with practical experience in digital marketing, content creation, and brand management currently serving as a Senior Marketing Executive at A2Z Gadget. Adept at bridging the gap between software development and digital strategy, eager to leverage technical skills and creative expertise in a dynamic tech-driven environment.

Career Objective

To build a professional career at the intersection of technology, digital marketing, and creative business operations, while applying my CSE knowledge, marketing experience, analytical thinking, and communication skills to deliver measurable results and continue developing professionally.

- **Core Concepts:** Data Structures, Algorithms, OOP, Database Management Systems, Software Engineering

Academic Projects

DIU STUMATE — STUDENT SUPPORT WEB APP (Live)

- Designed a student-focused interface bringing commonly used DIU academic resources into one place.
- Planned modules for DIU Website, Student Portal, BLC, Academic Result, Question Bank, Cover Page, and Student Hub.
- Focused on simple navigation, accessibility, and practical student use.

Expensio — Tour & Business Expense Manager (In Progress)

- Implemented tour event creation, expense logging, and automatic bill-splitting mechanics as dues.
- Built a two-step approval flow to seamlessly settle shared expenses among friend groups.
- Designed an optional paid Business module for tracking investments and profits among partners.
- Handled comprehensive system testing, validation, and documentation for accurate financial tracking workflows.

RootForge — Numerical Methods Project (In Progress)

- Worked as an algorithm specialist focusing on numerical methods.
- Implemented Bisection and False Position root-finding methods via an interactive engine.
- Built fast processing capabilities to find roots of continuous functions.

- Designed iteration tables and high-precision outputs for easy equation solving.

BisonBank — Compiler Design Project (Future Work)

- Worked as a system designer focusing on backend banking logic and terminal simulation.
- Implemented secure account data structures and transaction history mechanisms via a command-line interface.
- Built fast processing capabilities for ATM operations like deposits, withdrawals, and fund transfers.
- Designed interactive terminal commands, user-admin switching, and real-time statement tracking for easy banking.

DIU TRANSPORT MANAGEMENT SYSTEM — C PROJECT (Future Work)

- Developed a console-based transport management concept using core data-structure techniques.
- Worked with linked-list-based modules for bus, route, and student registration management.
- Applied a Binary Search Tree concept for bus-fare structure and searching.

Marketing & Professional Skills
